WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Roof 500 wide x 240 deep, folded from one blank with a 60 mm front lip and two side cheeks 120 deep x 90 long; notch the corners before folding, seal them with sealant.

Four 5.5 mm holes in the roof at 150 mm each side, 30 and 70 mm in front of the back edge (over the tray rivet nuts).

Round every exposed corner to at least 10 mm: the hood is at head height.

LED angle: 300 mm of 20 x 20 x 1.5 angle, riveted under the roof 20 mm behind the lip, one leg facing the screen; stick the LED strip on that leg.

Fit: the roof sits on the tray top, back edge on the post.

Check: the lip hides the LED strip from the sidewalk.
